Intermational Council for the Exploration of the Sea

## Small-eyed ray (Raja microocellata) in divisions 7.f and 7.g (Bristol Channel, Celtic Sea North)

## ICES advice on fishing opportunities

ICES advises that when the MSY approach is applied, landings should be no more than 86 tonnes in each of the years 2023 and 2024. ICES cannot quantify the corresponding catches.

## Stock development over time

Stock size is above MSY Btrigger proxy (Itrigger), and the fishing pressure is below Fmsy proxy (Table 1).

Figure 1 Small-eyed ray in divisions 7.f and 7.g. Summary of the stock assessment. ICES estimated landings since 2009. Biomass index from the UK (E\&W)-BTS-Q3 survey [B6596] in divisions 7.f and 7.g (individuals $\geq 50 \mathrm{~cm}$ total length). Solid horizontal lines show the mean stock-size indicator for 2017-2019 and 2020-2021.

## Catch scenarios

ICES framework for category 3 stocks was applied (rfb rule, method 2.1; ICES, 2022c). A survey biomass index was used as an indicator of stock development. The advice is based on the recent advised landings, multiplied by the ratio of the mean of the last two index values (index A) and the mean of the three preceding values (index B), a ratio of observed mean length in the catch relative to the target mean length, a biomass safeguard, and a precautionary multiplier. The stability clause was considered and applied to limit the reduction in landings advice to $30 \%$.

Discarding is known to take place, but ICES cannot estimate the quantity or the corresponding dead catch.

Table 1 Small-eyed ray in divisions 7.f and 7.g. The basis for the catch scenarios. Landings are in tonnes. *

| Previous landings advice $A_{y}$ |  | 123 tonnes |
| :---: | :---: | :---: |
| Stock biomass trend |  |  |
| Index A (2020, 2021) |  | $0.24 \mathrm{~kg} . \mathrm{h}^{-1}$ |
| Index B (2017, 2018, 2019) |  | 0.87 kg. ${ }^{-1}$ |
| $r$ : stock biomass trend (index ratio $A / B$ ) |  | 0.28 |
| Fishing pressure proxy |  |  |
| Mean catch length ( $L_{\text {mean }}=L_{\text {2019-2020 }}$ ) |  | 73 cm |
| MSY proxy length ( $L_{F}=\mathrm{M}$ ) |  | 71 cm |
| f: fishing pressure proxy relative to MSY proxy ( $L_{\text {mean }} / L_{\text {F }}$ M ) |  | 1.02 |
| Biomass safeguard |  |  |
| Last index value ( $\mathrm{I}_{2021}$ ) |  | 0.42 kg. ${ }^{-1}$ |
| Index trigger value ( $l_{\text {trigger }}=l_{\text {loss }} \times 1.4$ ) |  | $0.095 \mathrm{~kg} . \mathrm{h}^{-1}$ |
| b: index relative to trigger value, $\min \left\{\mathrm{I}_{2021} / \mathrm{I}_{\text {triger }}, 1\right\}$ |  | 1 |
| Precautionary multiplier to maintain biomass above $\mathrm{B}_{\mathrm{lim}}$ with $95 \%$ probability |  |  |
| m : multiplier (generic multiplier based on life history) |  | 0.95 |
| Stability clause ( $+20 \% /-30 \%$ compared to $A_{y}$, only applied $I_{2021} \geq I_{\text {trigger }}$ ) | Applied | 0.7 |
| Discard rate |  | Unquantified |
| Landings advice for 2023/24 ** |  | 86 tonnes |
| \% advice change ${ }^{\wedge}$ |  | -30\% |

* The figures in the table are rounded. Calculations were done with unrounded inputs, and computed values may not match exactly when calculated using the rounded figures in the table.
** Formula [ $A_{y} \times r \times f \times b \times m$ ], limited by stability clause if applicable.
${ }^{\wedge}$ Advice value for 2023 and 2024 relative to the advice value for 2021 and 2022 (123 tonnes).
The advice landings are lower than the advice for 2021 and 2022 because the biomass index has declined.

## Basis of the advice

Table 2 Small-eyed ray in divisions 7.f and 7.g. The basis of the advice.

| Advice basis | MSY approach |
| :--- | :--- |
| Management plan | ICES is not aware of any agreed precautionary management plan for small-eyed ray in this area |

## Quality of the assessment

The quality of landings data has improved in recent years. Reported landings of Leucoraja circularis are considered to refer to Raja microocellata in this stock area, due to confusion over the local name "sandy ray". These landings have therefore been reallocated to this stock. While the main part of the stock occurs in Division 7.f and the eastern part of Division 7.g, the stock also extends into the southern parts of Division 7.a (with occasional vagrants in the northern Irish Sea). Reported landings from Division 7.a are therefore also allocated to this stock.

The UK (E\&W)-BTS-Q3 [B6596] covers the main stock area in the Bristol Channel (ICES, 2022b).

## Issues relevant for the advice

This is a coastal species, and it is a bycatch of trawl and gillnet fisheries. Although not usually targeted, it is one of the important components of the Bristol Channel skate fishery.

Regulations for fishing opportunities have a TAC for $R$. microocellata in divisions 7.f and 7.g within the overall TAC for skates and rays in divisions 6.a, 6.b, 7.a-c, and 7.e-k. Juvenile small-eyed ray occur in the shallower waters of

Carmarthen Bay (Division 7.f). These grounds are often fished by whelk potters, and the presence of such static gear may limit the impacts of trawling on the nursery grounds.

A Belgian fisheries producer organization established a measure to exclude landings of this species, from 1 January 2021, which will have increased discarding.

The biomass index in the last three years has been at a very low level with 2020 being the lowest observed. The ability of the stock to recover from such a low level is unknown.

## Reference points

Table 3 Small -eyed ray in divisions 7.f and 7.g. Reference points, values, and their technical basis.

| Framework | Reference <br> point | Value | Technical basis * | Source |
| :---: | :---: | :---: | :---: | :---: |
| MSY approach | MSY $\mathrm{B}_{\text {triger proxy }}$ | 0.095 | Biomass index trigger value ( $l_{\text {trigger }}$ ), defined as $l_{\text {trigger }}=I_{\text {loss }} \times 1.4$, where $l_{\text {loss }}$ is the lowest observed historical biomass index value for 2020. | (ICES, 2022c) |
|  | FMSY proxy | 1 | $L_{\text {mean }} / L_{F=M}$; Mean catch length divided by MSY proxy reference length ( $L_{F=M}=71 \mathrm{~cm}$ ). | (ICES, 2022c) |
| Precautionary approach | $\mathrm{Bl}_{\text {lim }}$ | Not defined |  |  |
|  | $\mathrm{B}_{\mathrm{pa}}$ | Not defined |  |  |
|  | Flim | Not defined |  |  |
|  | $\mathrm{F}_{\mathrm{pa}}$ | Not defined |  |  |
| Management plan | SSB ${ }_{\text {mgt }}$ | Not applicable |  |  |
|  | $\mathrm{F}_{\text {MGT }}$ | Not applicable |  |  |

* No reference points are defined for this stock in terms of absolute values. The LBI-estimated values the ratio $L_{\text {mean }} / L_{\text {f }}=\mathrm{m}$ are used to estimate exploitation status relative to the proxy MSY reference point.

## Basis of the assessment

Table 4 Small-eyed ray in divisions 7.f and 7.g. Basis of the assessment and advice.

| ICES stock data category | 3 (ICES, 2022a). |
| :--- | :--- |
| Assessment type | Trends from biomass index and length-based indicators (ICES, 2022b). |
| Input data | Survey:UK (E\&W)-BTS-Q3 (B6596), length composition data from commercial fisheries. |
| Discards and bycatch | Discarding is known to take place but has not been quantified. |
| Indicators | None. |
| Other information | None. |

## History of the advice, catch, and management

Table 5 Small-eyed ray in divisions 7.f and 7.g. History of ICES advice and ICES estimates of landings. All weights are in tonnes.

| Year | ICES advice | Landings corresp. <br> to advice | TAC * | ICES species-specific landings: minimum <br> estimate based on reported landings |
| :---: | :--- | ---: | ---: | ---: |
| 2011 | No specific advice |  |  |  |
| 2012 | No specific advice |  |  |  |
| 2013 | No TAC, species-specific measures needed, <br> catch to decrease by at least 36\% (reduction <br> of 20\% followed by 20\% PA buffer). | - |  |  |
| 2014 | No new advice, same as 2013. | - |  |  |
| 2015 | Reduce catches by 36\%. | 188 |  |  |
| 2016 | No new advice, same as 2015. | 188 | 188 |  |
| 2017 | Precautionary approach | $\leq 154$ | 154 |  |
| 2018 | Precautionary approach (same value as <br> advised catches for 2017) | $\leq 154$ | 154 |  |
| 2019 | Precautionary approach | $\leq 192$ | 192 |  |
| 2020 | Precautionary approach | $\leq 192$ | 192 |  |

| Year | ICES advice | Landings corresp. <br> to advice | TAC * | ICES species-specific landings: minimum <br> estimate based on reported landings |
| :---: | :--- | ---: | ---: | ---: |
| 2021 | Precautionary approach | $\leq 123$ | 123 |  |
| 2022 | Precautionary approach | $\leq 123$ | 123 |  |
| 2023 | MSY approach | $\leq 86$ |  |  |
| 2024 | MSY approach | $\leq 86$ |  |  |

* Fishing opportunities are managed through an overall TAC by management unit, which includes all species of skates and rays. Since 2016, there has been a specified TAC for this stock in the overall management unit.

## History of the catch and landings

The distribution of this stock does not extend into the NEAFC Regulatory Area.
Table 5 Small-eyed ray in divisions 7.f and 7.g. Catch distribution by fleet in 2021 as estimated by ICES. Landings data for Division 7.a also allocated to this stock.

| Catch | Landings |  | Discards |  |
| :---: | :---: | :---: | :---: | :---: |
| Unknown | Beam trawl | Other trawl | Nets |  |
|  | $3 \%$ | $87 \%$ | $10 \%$ |  |
|  |  | 110 tonnes |  |  |

Table 6 Small-eyed ray in divisions 7.f and 7.g. History of landings *. ICES estimates of landings by country (in tonnes). Blank cell $=$ no data reported; $0=$ value less than 0.5.

| Year | Belgium | UK | Ireland | France | Total landings |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2009 |  | 157 |  | 29 | 187 |
| 2010 | 37 | 214 | 0 | 21 | 272 |
| 2011 | 117 | 189 | 0 | 16 | 323 |
| 2012 | 124 | 208 | 0 | 30 | 362 |
| 2013 | 99 | 117 | 0 | 30 | 247 |
| 2014 | 83 | 79 | 0 | 65 | 227 |
| 2015 | 106 | 78 | 0 | 31 | 216 |
| 2016 | 123 | 69 | 0 | 5 | 198 |
| 2017 | 116 | 30 |  | 56 | 201 |
| 2018 | 121 | 55 |  | 69 | 245 |
| 2019 | 137 | 83 | 0 | 92 | 313 |
| 2020 | 94 | 67 |  | 69 | 230 |
| 2021 |  | 68 | 0 | 42 | 110 |

* The figures in the table are rounded. Total landings were calculated using unrounded inputs and computed values may not match exactly when calculated using the rounded figures in the table.

## Summary of the assessment

Table 7 Small-eyed ray in divisions 7.f and 7.g. Time-series of survey index used for the advice. Series are the mean biomass per hour (individuals $\geq 50 \mathrm{~cm}$ total length) from the UK (E\&W)-BTS-Q3 (B6596).

| Year | Biomass index kg. $\mathrm{hr}^{-1}$ | $\begin{aligned} & \text { High } \\ & 95 \% \mathrm{Cl} \end{aligned}$ | $\begin{gathered} \text { Low } \\ 95 \% \mathrm{Cl} \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| 1993 | 1.05 | 2.0 | 0.31 |
| 1994 | 1.88 | 3.4 | 0.63 |
| 1995 | 2.3 | 4.4 | 0.66 |
| 1996 | 0.53 | 1.19 | 0.084 |
